# Velociti Technology Infrastructure

Peazy + OnTheJob for Velociti

The Velociti technology infrastructure is designed to create a seamless flow of information from the field to executive-level reporting. At its core, the system integrates **Peazy** and **OnTheJob**, two operational platforms that capture real-time data on work completion, workforce activity, and quality performance. These systems feed directly into our **centralized Data Stack**, which standardizes and organizes data across all locations and service lines.

From there, the **Data Stack** powers both **business intelligence (BI) tools** for advanced reporting and analytics, and the **online Peazy dashboard**, which delivers live operational insights for managers and stakeholders. This connected ecosystem ensures that every activity—from individual task verification to enterprise-wide performance trends—is visible, measurable, and actionable in real time.

Peazy
Real-time service verification platform
- Task completion
- photo/video proof
- GPS Job Completion
- Alerts to Supervisors for Corrective Actions

OnTheJob
Employee Engagement Platform
- GPS check-in & check-out
